PROFILE

Product designer with 13 years in UX and UI design. Since 2019 I have designed Ingenious.Build, a US construction project management platform, on web and iOS. I work in English with the US team every day. I design complex B2B workflows with many roles and approval steps, like RFIs and daily reports. I work from the product requirements and the test results from our UX researcher. I write specs that developers and QA use.

EXPERIENCE

Ingenious.Build — 05.2019 to now, remote

PRODUCT DESIGNER, CONSTRUCTION SAAS, WEB AND iOS

- I design the platform on web and iOS, including RFIs, tasks, notifications and the home dashboard.
- For the new iOS app, rolling out now, I designed RFIs and Daily Logs: 179 screens designed and annotated for engineering.
- Based on the PRD and UX test findings, I designed one RFI action banner with 33 role-based states, each mapped to a PRD case. I also designed one pattern for all 10 Daily Log categories.
- Developers and QA work from my UX notes: the reason for each decision, API limits and parity with the current app and the web.

ServoCode — 07.2017 to 04.2019, Warsaw

UX/UI DESIGNER

- I designed web and mobile apps for client products.

Kiwi Media — 11.2015 to 07.2017, Rzeszów

UX/UI DESIGNER

- I designed websites and digital products for clients.

Inglot — 10.2013 to 11.2015, Przemyśl

UX/UI DESIGNER

- I designed the online store of a global cosmetics brand.

SELECTED PROJECTS

Vitro-Soft, NDA	Web app for IVF clinics, where staff used paper and Excel before. I was the only designer, for about half a year, with an IVF doctor, an embryologist and a developer. 58 screens, 13 printouts and a UI library that developers build the app from. Used in selected IVF clinics.
Warehouse operations, NDA	Web app for a US telecom company, used by warehouse operators. My scope was UX strategy, IA, UI and prototyping. Status comes first, and operators can fix some problems in one click.
4Clubbers	Live event app (4clubbers.app) with about 5,000 registered accounts. I designed it from scratch, then the MVP-2 social features: crews, event boards, chats and safety tools.
uxaudyt.pl	I run UX audits of online stores.

SKILLS AND TOOLS

Product design	Complex B2B workflows, information architecture, roles and permissions, interaction design, prototyping, edge cases and error states, accessibility, cross-functional work with product and engineering
UI design	UI for web and iOS, design systems and UI libraries (Figma variants), printable documents
Domains	Construction tech, clinical workflows (IVF clinics), warehouse operations, consumer mobile apps, e-commerce
Tools	Figma, FigJam, Photoshop, Illustrator. AI: Claude, OpenAI, Figma AI agent
Languages	Polish (native), English (B2, daily work with a US team since 2019)
